Work even more comfortably with the Barmouse Wrist Rest

The Barmouse Wrist Rest is an accessory for the Barmouse.

It is a soft rest that gives your wrists extra support when working with the central mouse.

When working with a keyboard and mouse it is important that the arm is sufficiently supported. This can be done by using a good armrest on the desk chair or a separate armrest.

Convenient: easy to place on the Barmouse.

Comfortable: large wrist rest gives more support.
