DVD+RW Colours

Verbatim DVDR/RW uses MKM/Verbatim's technology which ensures any recording to be of a superior quality. Mitsubishi Chemical's R&D combined with its strong cooperation with drive manufacturers ensures the broad compatibility of Verbatim's discs making them ideal for sharing computer data, home videos, photos and music. From Europe's Number 1* for recordable media

* SCCG CD/DVDR '03 - '13.

DVD+RW is a rewritable disc providing 4.7GB capacity. Compliant with the +RW-Alliance specifications. Verbatim's DVD+Rewritable use a Super Eutectic Recording layer (SERL). SERL ensures that noise-free recording can be enjoyed time and time again. With conventional rewritable media, the recording layer deteriorates with every rewrite, meaning a decrease in quality. With Verbatim rewritable media however, the recording layer is returned to perfect condition on every erase cycle, leaving a flawless disc for the next recording.

DVD+RW is a sequential read / write media primarily designed for video recording and streaming backup applications. DVD+RW discs can be written up to 1000 times. A number of DVD-ROM drives and DVD video players support DVD+RW.

Increased resistance to UV light.
Proprietary SERL Technology.
Superior Archival Life.

Five different coloured surfaces provide options for categorisation. Can be written on with a CD/DVD marker pen.

Product Number: 43297
Capacity: 4.7GB
Speed: 4x
Pack Style: 5 Pack OPP Slim Case
